## DETAILED ACTION

### *Election/Restrictions*

Claims 5 and 6 withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made **without** traverse in the reply filed on October 27, 2004.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 2-4 and 7-9 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S.

Patent No. 4,542,302 to Griffioen.

Regarding claims 2 and 8, Griffioen disclose a probe for connecting a device under test having a probe tip connecting to a source and a ground of the device under test (column 1 line 63 to column 2 line 13, Fig. 1 elements 2 and 9), a cable including a first electrical connection carrying a signal representative of the source from the probe tip to the measurement device and a second electrical connection connecting the ground of the device under test to the ground of the measurement device (column 1 line 63 to column 2 line 13, Fig. 2 elements 2 and 9) and active circuitry identifying a voltage drop between the ground of the device under test and the ground of the measurement device and correcting the signal for the voltage drop prior to reaching the measurement device (column 2 lines 41-52).

Art Unit: 2858

Regarding claim 3, Griffioen discloses a detection circuit that outputs a compensation signal proportional to the voltage drop between the ground of the device under test and the ground of the measurement device (column 2 lines 41-52) and a summing circuit that subtracts the compensation signal from a signal proportional to the signal from the source (column 2 lines 41-52).

Regarding claim 4, Griffioen disclose the probe as described above wherein the detection circuit forms a third electrical connection between the ground of the device under test and the ground of the measurement device (column 1 lines 4-7, column 2 lines 41-52, Fig. 1 element 2).

Regarding claim 7, Griffioen disclose means for correcting the signal for the voltage drop prior to reaching the measurement device (column 2 lines 41-52).

Regarding claim 9, Griffioen disclose a logic analyzer/processing circuit (7).
